

Issues resolved

1. When submitting a transaction in auction modes, the **Price** field was not available for editing in the specialized order entry form with the ability to view or specify the yield.
2. The commission was nulled in the specialized order entry form for the modified REPO when the lot quantity was changed.
3. Incorrect operation of the CoLibri risk manager terminal module when used with QUIK workstation versions 13.0.0 and 13.0.1 caused errors in the automatic sending of margin calls and prevented the display of all client codes from the table in the **Close position** window.
