

# Features of new version

1. Allocation of the POS order group for an instrument has been supported.  
**The Bookbuilding module version 2.6.0 or newer must be installed to allocate by the order group.**
2. The **Cur. net pos. appr.** parameter has been deleted from the **Client account positions** table due to the termination of its transmission by the trading system.
3. The **Information on instrument** window has been redesigned: the appearance and display order of the instrument parameters have been changed. For details, see sub-sections 3.2.6-3.2.7 of the QUIK User's Manual.
4. When setting permissions to receive NDM quotes in the **Permissions to receive NDM quotes** dialog, the list of firms no longer displays firms for which permissions have already been set for the selected class.

# Issues resolved

1. A central strike was not highlighted in the **Options board** table unless the **Premium CALL / Premium PUT** parameters were added to it.
2. Dynamic data update error when displaying the **Buy/Sell** table via a DDE server.
3. Data retrieval was optimized for large numbers of open quote windows with the top panel containing the parameters of the **Quotes** table.
4. The cursor focus in chat window was not saved when switching between windows.
5. When calculating portfolio parameters, instruments falling under the **Non-margin asset accounts** setting were considered as margin one.

## Changes in QUIK Workstation 13.1.0

6. Incorrect calculation of the volume of collateral and the maximum available quantity in the order entry form on the derivatives market without unified cash position.
7. An error, due to which client code was specified incorrectly when setting the client profile in the **Substitute client codes with client names** mode.
8. When opening the order entry form from the **Quotes** table, auction price was not entered if it was less than 1.
9. An error in rounding the volume when registering an OMS order in the QUIK workstation.
10. In the order entry form, the trading system commission was calculated for the closing auction when its accounting was disabled on the server.
11. REPO amount was calculated incorrectly on the REPO with CCP order entry form due to incorrect rounding.
12. An error, due to which the settlement code configured by default in the QUIK REPO Module was not entered in the negdeal REPO order entry form.
13. An error, due to which the **New quote** context menu item was inactive for REPO M modes in the **Quotes** table.
14. Positions were not closed via the CoLibri risk manager terminal module if there were active stop orders and the **Cancel active orders** option was enabled.
